

Employee Attrition

By: Emam Abu-Haifa
Fellow at Correlation One: Tech for jobs

Introduction:

Employee attrition is a major challenge for organizations, impacting productivity, morale, and financial stability. High turnover rates can lead to increased hiring costs, lost expertise, and disruptions in business operations.

Data:

IBM HR Analytics Attrition Dataset

Source: <https://www.kaggle.com/datasets/pavansubhasht/ibm-hr-analytics-attrition-dataset>

Size: 1,470 rows and 35 columns.

Features: Includes employee demographics (e.g., Age, Gender), job-related factors (e.g., Job Role, Department), and performance metrics (e.g., Monthly Income, Years at Company).

Target Variable: "Attrition" (Left/Stayed).

EDA:

The percentage of employees who leave (attrition) **16%** is lower than the percentage of employees who `stay **84%**, which is a good thing. However, what is the reason behind this attrition.

The oldest Employee Age in the company have 60 years old, The newest Employee Age in the company have 18 years old, The most Age range in the company is from 25-45.

Conclusion:

Final Strategic Recommendations:

To reduce attrition and enhance retention, the company should:

- ✓ Improve workplace conditions and work-life balance to boost employee satisfaction.
- ✓ Develop structured career progression plans to support employees in early- to mid-career stages.
- ✓ Review salary structures to ensure fair compensation across job levels.
- ✓ Strengthen employee recognition programs to enhance engagement.
- ✓ Implement department-specific interventions, particularly in Sales and Research & Development, to address unique attrition challenges.
